

FPSO Training Course
Radisson Blu Boulogne Hotel, Paris ~ December 2016
Session 1.7 - Interface management for FPSO
projects – tools, procedures & key lessons
learned

Ian Parsons – Crondall Energy Consultants Ltd.

Agenda

- ❑ What are interfaces?
- ❑ Interface management.
- ❑ Interface management systems.
- ❑ Key interface systems and areas.
- ❑ Lessons learned.

What are interfaces?

What are interfaces?

- ❑ Interfaces exist where two work scopes meet and data needs to be supplied from one interface party to the other.
- ❑ Interfaces exist in two forms:
 - “Hard” interfaces: Where there is a physical connection;
 - “Soft” interfaces: Where the connection is data and is more information / design basis / philosophy related.
- ❑ The number of (main) contracts will not change the number of physical interfaces, but it will change the number that need to be managed across scope boundaries. Within scope boundaries, main contractors still have to manage interfaces with sub-contractors, vendors and within functions/disciplines etc.

Hard interfaces

“Hard” interfaces may comprise:

- ❑ Structural supports, e.g. flare tower or process support structure.
- ❑ Piping tie-ins, e.g. Utility supplies from marine supply systems to topsides users.
- ❑ Offloading systems.
- ❑ Cabling, e.g. power or control cables.
- ❑ Escape route locations.

Soft interfaces

“Soft” interfaces may include:

- ❑ Motion and acceleration data.
- ❑ Turret riser & mooring dynamics.
- ❑ Swivel path flow rate and pressure requirements.
- ❑ Material handling requirements.
- ❑ Crude oil density for stability and motion analyses.

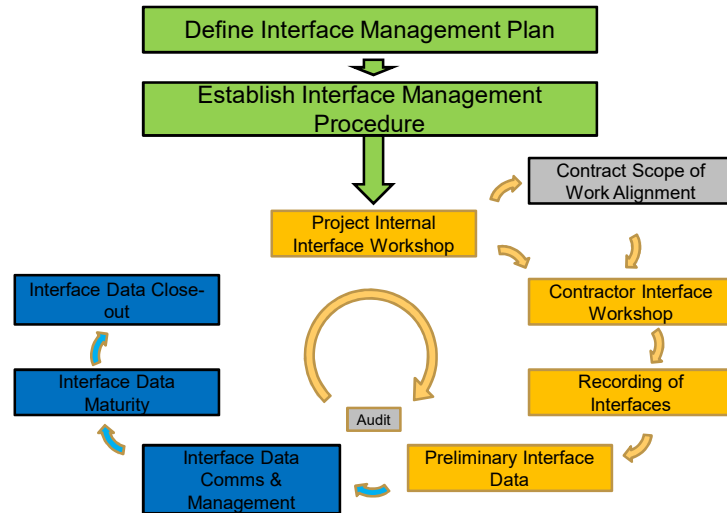

Interface management

Interface management objectives

The objectives of the Interface Management are to:

1. Ensure that all interfaces, interface data requirements, any potential problem areas are identified early in the design process, clearly defined, documented and agreed by both parties; **Identification.**
2. Ensure that interface scope boundaries are known, communicated, understood and agreed by all relevant parties; **Responsibility.**
3. Ensure that interfaces and interface data requirements are reviewed, provide a process to track status/close-out of interface issues/problems, and interface data maturity plan is updated regularly; **Visibility.**
4. Ensure that all engineering and construction activities are executed in a manner to enable timely and relevant interface data exchange and identified interface issues/problems are resolved and closed out; **Deliverability.**

Interface management process

Other Forms of Interface Data Records...

- ❑ Not all Interface Data will be captured in the Interface Management System.
- ❑ Some interface data will be captured in:
 - Key Project Documents
 - e.g. Basis of Design (product specifications)
 - Key contract documents
 - e.g. Contract Specifications (riser sizes)
 - Standard engineering deliverables
 - e.g. interface P&IDs
 - This information will not have formal interface documentation associated with it.

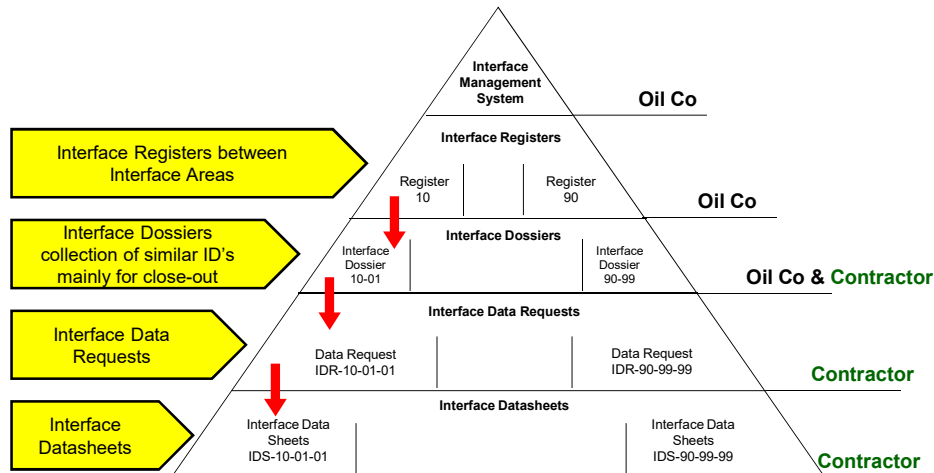

Interface management systems.

Interface Management Systems

Hierarchy of Interface Management documents to effectively manage the complex data sets.

- ❑ Interface Database:
 - The work horse of the Interface Management System;
 - Stores all interface data;
 - Produces required registers, reports & forms.
- ❑ Interface Registers:
 - Highest level of interface data;
 - Collates all data and requirements at each defined interface.
- ❑ Interface Dossiers:
 - Collection of Interface Data Requirements (IDRs) and Interface Data Sheets (IDS) relating to a common issue/ topic within a particular defined interface area (interface register);
 - May be single or multi discipline.

Interface management hierarchy

FPSO Paris Training Course 2016
Ian Parsons

Interface data forms

INTERFACE DATA REQUEST (IDR)				
Interface Data Request				
Interface Data Request No.	IDR - - -	Revision		
Interface Description				
Data Requested by			Data Supplier	
Project Interface Ref. No.	- - -			
Dossier Title			Dossier No.	-
Critical IDR (Y/N)				
Raised by	Name	Date		
Data Maturity Plan (requested dates)				
Preliminary Data	AFD Data		APC Data	
Interface Data Requirements				
Acceptance/ Approvals				
Contractor				
Required by		Supplied by		
	Name/ Signature:	Date:	Name/ Signature:	Date:
Discipline Engineer				
Interface Coordinator				
Scope Manager				
OilCo				
Required by		Supplied by		
	Name/ Signature:	Date:	Name/ Signature:	Date:
Discipline Engineer				
Scope Manager				
Interface Manager				
Engineering Manager				

INTERFACE DATA SHEET (IDS)				
Interface Data Sheet				
Interface Data Request No.	IDS - - -	Revision		
Interface Description				
Data Supplied by			Data Request by	
Project Interface Ref. No.	- - -			
Dossier Title			Dossier No.	-
Critical IDR (Y/N)				
Raised by	Name	Date		
Data Maturity Plan (agreed dates)				
Preliminary Data	AFD Data		APC Data	
Interface Data				
Acceptance/ Approvals				
Contractor				
Required by		Supplied by		
	Name/ Signature:	Date:	Name/ Signature:	Date:
Discipline Engineer				
Interface Coordinator				
Scope Manager				
Oil Co				
Required by		Supplied by		
	Name/ Signature:	Date:	Name/ Signature:	Date:
Discipline Engineer				
Scope Manager				
Interface Manager				
Engineering Manager				

FPSO Paris Training Course 2016
Ian Parsons

Interface management systems

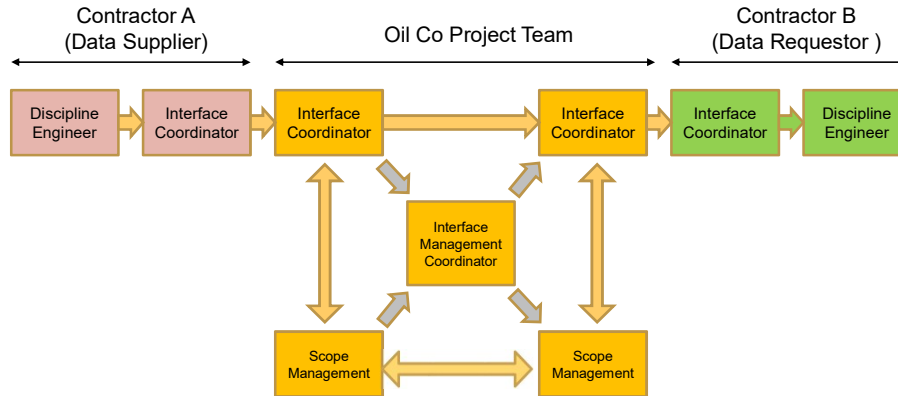

- ❑ Data base structured in various sections to allow multiple sorts, e.g.:
 - Interface Data Requirement (IDRs) by chronological log;
 - IDRs by Contractors;
 - IDRs by Discipline.
- ❑ Data entry by Interface Data Sheets (IDSs) based on Interface Data Requirements completed by Contractors at interfaces, including:
 - Piping;
 - Electrical;
 - Instrument;
 - Structural;
 - Safety.
- ❑ Miscellaneous reports available from the Database, typically:
 - IDR's Raised this Week;
 - Unassigned IDR's;
 - IDR's in Dispute.

Interface Management Systems

- ❑ Preference for Interface Management Systems to be:
 - Web based or enabled;
 - Proven systems.
- ❑ Other important interface documents include:
 - Responsibility Matrices:
 - Defines responsibility of each interface party throughout project lifecycle, e.g. RACI chart / matrix (Responsible – Accountable – Consulted – Informed).
 - Data Maturity Plans:
 - Key planning documents defining interface data maturity, i.e. preliminary, AFD or AFC status;
 - Defines when interface data is required as well as when it will be developed to required level.
 - Interface queries:
 - Provides mechanism for additional data requirements to be raised and controlled;
 - These additional requirements may or may not have contractual implications.

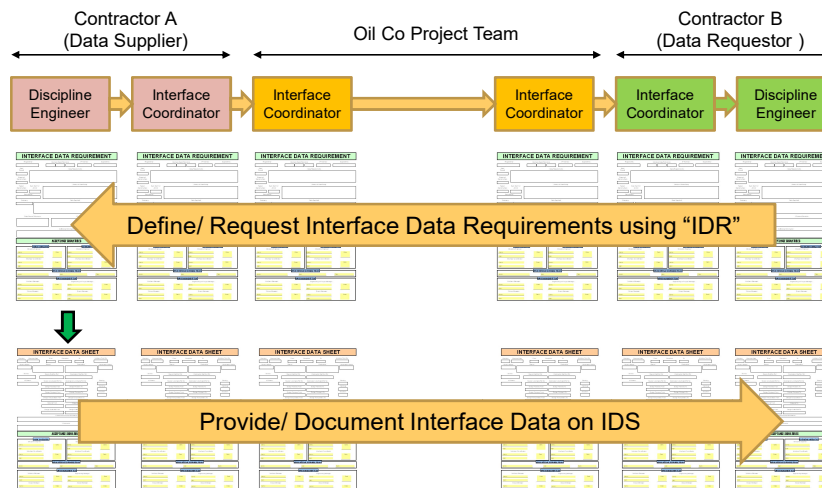

Interface Lines of Communication?

Ian Parsons

Interface Data Exchange

FPSO Paris Training Course 2016
Ian Parsons

Interface responsibility matrices

Scope Item	Scope Description	DB	Eng	Pro	Con	Del	Ins	MC	Pcom	Com
20 - Subsea Production System										
01	Umbilical Interface/ TUTU									
	Topsides Umbilical Termination Unit (TUTU)	EPCM	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	SPS	SPS
	Foundations, supports and fixings	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO
02	Subsea HPU									
	Main Subsea Hydraulic Power Pack	EPCM	SPS	SPS	SPS	SPS	FPSO	FPSO	SPS	SPS
	Package foundations, supports and fixings	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO
	Hydraulic piping to interface point	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO
	Hydraulic piping to swivel	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO
	Hydraulic piping from swivel to Umbilical interface point	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO/SPS	SPS
	Power supply cables and cable trays to/from unit	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO/SPS	SPS
	Control cables and cable trays to/from unit	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO/SPS	SPS
03	Subsea EPU/ UPS									
	Main Cabinet	EPCM	SPS	SPS	SPS	SPS	FPSO	FPSO/SPS	FPSO/SPS	FPSO/SPS
	Foundations, supports and fixings	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO
	Cables & cable trays from EPU to Turret interface point	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO/SPS	SPS
	Cables & cable trays from Turret to Umbilical interface point	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO/SPS	SPS
	Power supply cables and cable trays to/from unit	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO/SPS	SPS
	Control cables and cable trays to/from unit (all input/output)	SPS	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO	FPSO/SPS	SPS

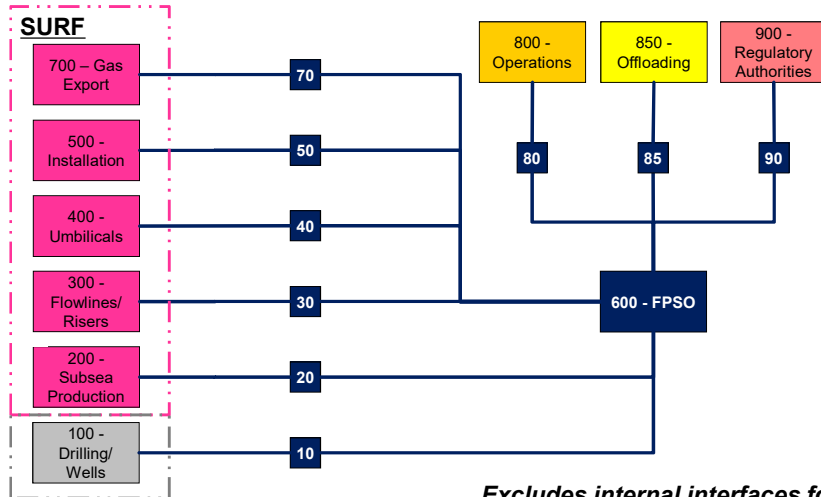

FPSO Paris Training Course 2016
Ian Parsons

Interface Areas

Interface Area Ref. No.	Interface Area
100	Drilling / Wells
200	Subsea Production System (SPS)
300	Flowlines & Risers
400	Umbilicals
500	Subsea Installation
600	FPSO
700	Gas Export Pipeline
800	Operations
850	Offloading
900	Regulatory Compliance

FPSO Paris Training Course 2016
Ian Parsons

Example interface register

FPSO Paris Training Course 2016
Ian Parsons

Excludes internal interfaces for:
SURF; Drilling; FPSO
Cron dallenergy

Interface Register 30: Riser-FPSO

Interface Number	Dossier Title
Dossier Ref	
30-01	Riser bend stiffener connection to FPSO
30-02	Riser hang off
30-03	Riser flange details
30-04	Riser FPSO I-tube interface
30-05	Riser annulus gas venting & monitoring
30-06	Riser & Mooring Analysis
30-07	Riser/Mooring Configuration
30-08	Mooring system design premise
30-09	Vessel Offset Requirements.
30-10	In-field pipelines pre-commissioning
30-11	Pigging facilities
30-12	Soil Data
30-13	Cathodic Protection
30-14	Riser properties

FPSO Paris Training Course 2016
Ian Parsons

Interface Register 50: Installation-FPSO

Interface Number	
Dossier Ref	Dossier Title
50-01	Riser Installation
50-02	Company Installation Vessel
50-03	Anchor Details
50-04	Diver Intervention Requirements
50-05	SIMOPS (FPSO Installation)
50-06	Riser commissioning philosophy
50-07	Umbilical commissioning philosophy
50-08	SURF contractor commissioning equipment
50-09	FPSO commissioning post riser pull-in

Interface due diligence activities

- ☐ Interface Coordination Audits:
 - Right procedures & systems – working by the same rules gives best chance of success.
- ☐ Discipline checklists:
 - Key risk areas – discipline based.
 - Examples include:
 - Electrical – voltages & frequencies;
 - Piping stress;
 - Material handling;
 - Material selection/ compatibility.
- ☐ Gap analyses:
 - Interface workshops and interface responsibilities checks.
- ☐ High level scope reviews:
 - One page contract summaries – senior management review.
- ☐ Interface HAZOPs.

Key interface systems and areas.

Key interface systems and areas

- ❑ Key interface areas will be between scope areas as defined above e.g. subsea etc.
- ❑ BUT –main contractor will need to manage sub-contracts with TMS and possibly topsides module vendors. The following systems and areas will require particular focus:
 - Module to module piping;
 - Structures;
 - Hull to turret, hull to topsides etc.
 - Power generation, distribution & fuel (main, essential and emergency);
 - Safety and control systems;
 - Escape and access ways;
 - Mechanical handling;
 - Utilities e.g. firewater, seawater, drains, steam, compressed air.

Lessons learned

FPSO Paris Training Course 2016
Ian Parsons

Interfaces are a key risk area

SUBSEA	HES	HULL + TURRET	TOPSIDSES	OPERATIONS
INTERFACES Management of interfaces and complexity	HAZOPS Management of Hazops, HES participation in and overall effectiveness	INTERFACES The risks associated with ineffective management of interfaces	INTERFACES and COMMON PROCESSES Management of interfaces and engineering standards across the project	OPERATIONS CONTRACTOR Definition of an effective contract relationship recruitment of senior staff
OUTSTANDING DESIGN ISSUES Designs not complete due incomplete studies or missing data from others	NORSOK Implementation and clarification of Norsok standards	WORKSCOPE DEFINITION Uncertainty in conversion workscope due to Topsides, approvals, engineering etc	DESIGN ISSUES UNRESOLVED Design issues incomplete due studies, waiting on contractors or data.	OPERATIONS INFLUENCE ON DESIGN Opportunity for Ops staff to improve design and operability
INSTALLATION RISKS Delays and problems related to installation vessels	APPROVALS Class, Norsok, NMD. PSA interfaces and implementation in design and verification	APPROVALS Class, Norsok, NMD. PSA interfaces and implementation in design and verification	CONTRACT SELECTION AND MANAGEMENT Selection of contractors, management of work performance motivation	MAINTENANCE BUILD Need to define maintenance strategy, agree the MM system and start entering data
SUBSEA QC/QA Implementing an effective programme of quality management			LLIs Implementing common standards of design and managing interfaces	OPERATIONS BUILD Delivery of all the systems, documents, processes and approvals

❑ Extracted from Alvheim lessons learned.

FPSO Paris Training Course 2016
Ian Parsons

Lessons learned (1)

Interface management strategy

- ☐ Keep number of main contracts (and hence contract interfaces) to a minimum.
- ☐ Get Interface Data Requirements built into contracts.
- ☐ Avoid transferring interface uncertainties on to contractors – don't throw scope to the other side of an interface in the hope that it will go away!
- ☐ Minimize change by systematic and stepwise close out of interfaces.
- ☐ Set up for formal interface procedure for engineering data sharing.

Lessons learned (2)

Interface management tools

- ☐ Use tried and tested interface procedures – do not use a prototype system.
- ☐ Do not solely rely on project tools – also concentrate on key interface drawings / documentation as set-out in Contracts.

Communication

- ☐ Best communication is through face to face meetings, formally confirmed through the interface management system. Phone and video conferences can also be used to a limited extent.

Interfaces are best managed through good personal relationships.
